

5G Dynamic Spectrum Management based on V2X Communication

Training Programme

by

Faculty of Engineering, Multimedia University

Overview

Advancement of wireless technologies towards 5G will have an increase of number of user in network system. V2V communication becomes an important concept which it provides communication and warnings between vehicles to prevent accidents from occurs. In 2019, the number of vehicle register in Malaysia are approximately about 550,000. Due to the overwhelming amount of vehicular communication, a base station will face a heavy traffic loading and may not be able to provide services for a large amount of vehicle users. Hence, dynamic spectrum can promising a solution to increase spectrum efficiency by allowing direct communication between the vehicles which are in proximity. 5G that coexists with the current LTE network to provide higher throughput in the V2X network. The idea of implementing licensed and unlicensed spectrums together in a V2X assisted users will be relevant to the landscape of the 5G networks today. This training will familiarize more on the 5G dynamic spectrum to achieve a higher network performance compared with other static fixed spectrums.
